

Teddy Bear Count 2007

Every fall, Mr. Breitsprecher and his Kindergarten students conduct a survey to determine how many bears are in the area. Understanding bear migration patterns is important. We also need to know how many bears the children in Ripon are taking care of. Can you help us count bears in your household?

With your help, children can count bears by using tallies - lines in groups of 5 - each bear gets one line. For example:

- The first bear would be counted like: |
- A second bear would be counted like: ||
- Three bears would look like: |||
- Four bears would be: ||||
- The fifth bear would finish the grouping: +++++

All bears should be counted and tallied - stuffed bears, ceramic bears, bear dolls, bear blankets, bear bedding, and even REAL bears. The data we collect is important and it helps us share number skills.

Can you and your child please tally the bears in your home on the back of this paper so that we can complete this year's survey? Please send this tally back with your child's library book. THANKS!
